Student Exercise: Auroras of Jupiter

The purpose of this exercise is to work with Meta Data and continue to practice importing and formatting text in Dreamweaver.

Use the mockup, *reference_auroras_of_jupiter.jpg*, as a guide to help you identify different elements on the page.

In this exercise, you will:

- Identify html tag structure
- Work with Meta Tags
- Copy and clean up text from a Word Document
- Format Text using Dreamweaver
- Insert a Horizontal Rule
- Insert a Date Object
- Use Spell Check
- Create Links (To external websites and an email address)

Instructions:

1. Clone the *Auroras of Jupiter* repository into the *Student Exercises* folder on your i:drive working folder
2. Open *reference_auroras_of_jupiter.jpg* and identify the html elements needed to structure your page (Note the headings, paragraphs, bolded text and links)
3. Open *auroras_of_jupiter.html*
4. Enter the Meta Information (Title Tag, Keywords and Description) found in *assets/jupiter_auroras_meta_links.doc*
5. Copy text from the document *Jupiter_auroras_copy.doc* from the *assets* folder and make sure to clean up any leftover word formatting

6. Using the mockup as a guide, format the text using the properties panel
7. Using the Insert Panel, insert a Horizontal Rule
8. Create the Footer text as shown in the mockup, using Shift + Enter to add line breaks as we did in class.
9. Using the Insert Panel, insert an email link in the footer
10. Using the Insert Panel, insert a date object using the following format: 'March 7, 1974'
11. Check your spelling and make any adjustments needed
12. Create Links as shown in the mockup, using the document *assets/jupiter_auroras_meta_links.doc*
13. Create an internal link to the page using the header image. *Link to the page, auroras_of_jupiter.html*
14. Save your changes.
15. Upload your completed work to GitHub
